

A simple and cost effective way to detect actual blood alcohol levels in minutes

This disposable QED® saliva alcohol test is a revolutionary breakthrough in quantitative on-site alcohol detection. Approved by the Department of Transport (DoT) in USA, it represents the latest and most accurate saliva diagnostic tool available today.

Accurate quantitative results in just 2 minutes

Built-in QA Spot™ assures quality control

Backed up by full chain of custody process

Long shelf life and no special storage

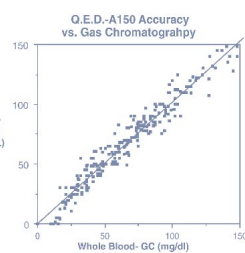

Easy to use with no calibration required

Non-invasive process and fully disposable

clinical laboratory accuracy...

The QED® test can be used as an accurate screen in place of blood tests. In clinical trials, saliva alcohol levels measured with the QED® test demonstrated high correlation to blood analysed by Gas Chromatography ($r=0.98$)¹ and produces no false positives or false negatives².

for only £5.95*

...in three easy steps

QED® is ideal if you are carrying out alcohol screening in multiple locations or in remote areas. It can be used for all screening requirements.
